

ABSTRACT OF THE DISCLOSURE

The type information of stimuable phosphor sheets is read from cassettes which store the stimuable phosphor sheets in cassette storage apparatus, and storage position information of the stimuable phosphor sheets is acquired. When subject information is set by ID terminals, a cassette having the type information that matches the subject information is selected from the cassette storage apparatus, and supplied to radiation image capturing apparatus. With respect to a stimuable phosphor sheet on which radiation image information has been recorded, the subject information is set in relation to identification information of the stimuable phosphor sheet.
